

THE INCLUSION EDIT

Visual Brand Guide.

Colours, typography, components, layout, imagery and accessibility for the website, the Impact Platform, learning materials, resources and Inclusion AI.

Approved by Rebekah Hayward, 6 November 2026 · Live version: claude.ai/artifact/NYNfZM3rCThHighH1acFT2

Status: approved by Rebekah Hayward, 6 November 2026. This guide sets the exact visual standards for the website, the Impact Platform, Foundation Lessons and modules, resources and workbooks, Inclusion AI tools, social content and documents. Existing pages are brought into line page by page, each checked with Rebekah before it goes live.

This is one of three connected documents:

1. Brand World: personality, emotional feel and design principles (the why).
2. **Visual Brand Guide** (this system): colours, type, components, layout, imagery and accessibility (what it looks like).
3. Brand Voice Guide: tone, language and terminology (what it sounds like).

Built from: the new website (localhost build, November 2026), which is now the approved standard for look and feel, plus the circular sage logo, the Impact Platform code and the Brand World. The old Canva brand kit palette belonged to the previous website and is retired, except Sage #8DBF87 in the logo and Pale Sage.

The visual standard

Recognisable even without the logo. **Recognisable, purposeful, credible, human, accessible, distinctive and consistent.** Thoughtful design, purposeful imagery, accessible presentation.

The website standard (approved November 2026)

The new website is the benchmark for how glossy, elevated, put together and professional everything should feel: real photography, strong contrast between whites and greens, big confident Playfair headlines and calm, generous space. It has had excellent feedback from everyone who has seen it. Web pages follow it directly. The Impact Platform shares its palette, type and photo hero but has its own cleaner finish (see Two looks, one brand, below, and section 12).

What makes it feel elevated

Signature treatment	How it is built
Photo hero	Full-bleed real photograph under the Forest overlay: linear-gradient(100deg, rgba(20,40,25,0.95) 0%, rgba(20,40,25,0.85) 38%, rgba(20,40,25,0.3) 70%, rgba(20,40,25,0.05) 100%), so faces stay visible on the right. Outlined glass eyebrow pill (1.5px White at 40%, backdrop blur 4px, uppercase, wide tracking). Playfair 700 headline at Display XL, in White or two-tone **Hero Cream** with **Hero Mint** accent words. One line of Lato intro. A White primary button with Evergreen text plus a glass secondary button. The circular logo badge top right. An optional frosted award card bottom right.
Trust strip	A quiet Sand to Sage Light band directly under the hero: five or six proof points, each with a line icon, an uppercase Raleway label in Evergreen and a short caption in Slate.
Frosted photo section	A softly blurred photograph behind a Sage Light veil at about 93% (rgba(232,238,230,0.93)), so the image is felt rather than seen. Centred eyebrow, centred Playfair H2, then cards.
Dark gradient cards	linear-gradient(160deg, Fern #3D6142 0%, Pine #2C4A31 60%, Deep Pine #1E3624 100%), radius 18px, shadow-feature, a faint decorative circle top right (White at 8%), Raleway 700 title in White, body in White at 85% or more. Used for values, principles, gains and hub navigation tiles.
Photo-top service cards	Real photograph across the top, a pale green gradient body (#F7FBF7 to #E2EFE2), 1.5px Sage Mid border at 35%, eyebrow, Raleway title, body, and a text link with an arrow.
Stat tiles	Pine blocks with large Playfair numerals in White and a short tracked label; every figure sourced.
Split feature panel	A photograph on one half and a Pine panel on the other, radius 18px: eyebrow pill, Playfair H2, intro, three icon points, one button.
Warm insight section	Linen to Parchment gradient ground with Gold border cards (Gold at 45%) and a Gold pill: used on the website to showcase Inclusion AI. Inside the platform, AI tools use the standard hub cards in the collection tones, marked by the INCLUSION AI pill with a gold sparkle (section 12).
Pricing cards	White cards on Mist; the recommended plan gets a 2px Evergreen border and a "Most chosen" tab; prices in Playfair.
Testimonial cards	Cream glass cards with a subtle concentric circle motif, italic quote in Lato, role and organisation type below. Real, attributed quotes only.
Footer	Deep Pine with a wide-tracked uppercase wordmark, the tagline, the award line in italic and social icons in White.

The type that carries it: Playfair Display 700 for heroes and section headings with tight leading (1.05 to 1.15); Raleway 700 for card titles, navigation and uppercase eyebrows with wide tracking (0.16em to 0.2em); Lato 400 for body at 17 to 18px with 1.7 line height. Because the approved website relies on Raleway for its polish, the recommendation in section 4 changes: **keep all three fonts.**

Accessibility notes on the website (seen in the current pages). Raise these with Rebekah; do not change the website design unasked. The same issues are always fixed on platform pages:

- Emoji used as icons (trophy, globe, chart, seedling, sparkles, books, clapper, tools, handshake, lightbulb, target, pencil, brain, person, building): part of the approved website look for now; swap to the line icon set only if Rebekah asks.
- Bright Gold headline words on light sections ("60 seconds", "Let's find your path") are 2.1:1: use Gold Deep #7A5200 on light grounds.
- Button hover goes lighter to #5C8C56 (3.9:1 with White): hover to Fern #3D6142 instead.
- Grey #6B7280 secondary text on Mist is 4.48:1 and fails: use Slate. Placeholder text #9A8060 on Linen is 3.6:1: use Slate.

- Sage #6B8F71 as small text (labels, captions) is 3.6:1: use Evergreen.
- Check the sourcing on the stat strip: "87% better decisions (Cloverpop 2017)" comes from a vendor white paper, and the McKinsey 2023 figure is contested (Green and Hand, 2024). The Brand Voice Guide recommends leading with stronger evidence.
- Remove any dashes used as punctuation; hyphenated compounds such as "e-learning" are fine.

Two looks, one brand (approved 6 November 2026)

The Inclusion Edit has **one brand and two looks**. Both share the palette, the three fonts, the logo, real photography, the Forest photo hero, the voice, the accessibility minimums, no dashes and real proof only. What changes is the finish, because the two places do different jobs.

	Website: the shop window	Impact Platform: the workspace
Job	Invite, reassure and persuade: show warmth and competence to people deciding whether to work with us	Help members choose, learn and act quickly
Feel	Glossy, competent, inviting, elevated	Clean, efficient, calm, easy to scan
Standard	**The current website pages exactly as they are:** Home, About, Impact Platform, Training, Consultancy, Bespoke Resources, Business Case, Pricing, Podcast and Contact. They are approved and are the template for any new website page	**The redesigned hub pages:** Learn is the reference, with Watch, Inclusion AI, Apply, Make the Case, Inclusion Editors, Get Support, Dashboard and Onboarding. They are the template for anything new in the hub or platform
Rhythm	Airy story rhythm, about 80 to 96px between sections	Compact: 40 to 56px between sections, tight inside components (section 8)
Signature finish	Gold glint highlight words, soft radial gold glows behind feature headings, the gold shimmer on the quick link strip, gold bordered controls with soft halos and the gold glint button in warm insight sections, frosted photo backed sections, pale green gradient card bodies, dark gradient cards with a faint circle, cream testimonial cards with circle rings, and the icons the pages already use	Collection tones, 6px card bands, section openers with a 4px left border, pale tints for everything you click, line icons, Ink on Gold pills, Evergreen buttons, and Gold only as the sparkle and Gold Light rings on dark grounds (section 12)

Never cross the looks. On 6 November 2026 the platform rules were applied to the homepage and made it worse: it lost its gloss and looked like a tool, so it was restored. Website pages never take collection tones, 6px bands, section openers, compact density or flat tinted cards. Platform pages never take gold glints, glows, shimmer, warm gold controls or frosted photo sections.

Working on existing website pages: improve the wording and fix anything broken or untrue (dead links, buttons that pretend to send), and keep the design, layout, colours and icons exactly as they are unless Rebekah asks for design changes on that page. **New website pages** copy the patterns of the existing website pages, never the platform. **New platform features** copy the hub pages.

Designing for the person carrying inclusion (approved 10 November 2026)

Everything is designed first for **the person carrying inclusion**: the one leading or doing the inclusion work in their organisation, largely alone and short of time. Their **approver** (HR director, chief people officer or chief executive) is the second reader. The full customer brief is saved in the project as "The Person Carrying Inclusion".

- **Credible at a glance.** The website must look premium enough that the person carrying inclusion is comfortable forwarding it to their director, and that the director trusts it in seconds: real photography, white and green contrast, Playfair headings, sourced proof.
- **Fast for a time poor reader.** Images as progressive JPEG, compressed, so pages load quickly on any connection. On the platform, the next action is always visible without scrolling.
- **Photography of real working people.** People in real working situations: one person at a desk working through a plan, small groups in discussion, peers comparing notes, someone presenting to leaders. Different backgrounds, roles, ages and bodies, never as symbols. Avoid handshakes, lightbulbs, puzzle pieces, pointing at laptops and stock line ups.
- **Accessibility is a brand promise.** For an inclusion business it is proof of competence: WCAG 2.2 AA as the floor, strong contrast, clear buttons with visible focus, readable type, reading preferences on the platform.

The approver panel. Where a page speaks to the approver, that part gets its own clearly different, more formal treatment, so each reader can tell at a glance which part is for them.

	Website	Impact Platform
Container	Dark card gradient (Fern to Pine to Deep Pine), 18px radius, shadow-feature, set apart from the sections around it	White panel with a 1.5px Line border and a 6px Pine top band, 12px radius
Label	Uppercase eyebrow in Hero Cream: "For your leadership team"	Uppercase eyebrow in Pine: "For your leadership team"
Content	Playfair heading in White; three outcome points (return, risk, reporting) with Gold Light line icons; any figure in Playfair with a short attribution	Raleway heading in Ink; three outcome points with Pine line icons; a "Share with your director" action
Action	One formal call to action: Book a Call to Discuss Your Organisation, or See Organisation Pricing	Download the Business Case Summary, or Copy Link
Never	Emotional or first person copy, more than one action, unsourced numbers	Emotional or first person copy, more than one action, unsourced numbers

One brand across every digital touchpoint

Every digital touchpoint must feel like part of the same brand. Board feedback in November 2026 was that some areas of the platform, especially the AI tools, felt disconnected and looked as if they had come straight from an AI assistant, including the typography and presentation. The rules that follow from that:

- The website, Impact Platform, AI tools, learning modules, resource library, video pages, dashboards and supporting materials follow **one coherent visual identity**.
- No feature introduces its own visual style, typography, colour scheme or design language.
- **Reuse existing components** (sections 5, 6 and 12 and the component previews) before designing anything new. A new component needs a reason the existing ones cannot meet.
- **AI-generated components are refined before they ship.** Nothing goes live looking like an unedited AI template or a default interface: no default system fonts, default grey cards, generic violet gradients or stock icon grids.
- **Consistency never means blandness.** Pages share one structure, type and palette, but each can still be visually interesting through purposeful photography, layout rhythm and the collection tones.

One-page reference sheet

Element	Approved specification
Primary logo	Circular Sage badge with wordmark, tagline and megaphone (Logos assets)
Secondary logo	Short badge; white and single-colour versions to be produced
Primary green	Evergreen #4A6347, RGB 74 99 71 (from the website)
Signature green	Sage #8DBF87, RGB 141 191 135, CMYK 26 0 29 25
Deep greens	Forest #1A3220, Pine #2C4A31, Deep Pine #1E3624, Fern #3D6142
Neutrals	White, Mist #F4F7F4, Sage Light #E8F0E9, Linen #FDFAF5, Parchment #FAF6EE, Ink #1C1C1C, Slate #4B5B4E
Accent	Gold #C9A84C (fills and on dark), Gold Deep #7A5200 (text on light)
Category colours	Seven, section 3
Hub collection tones	Green, Purple, Amber, Blue: rich headers with pale tints inside (section 3)
Heading font	Playfair Display 700 and 800
Interface and body fonts	Raleway 600 and 700; Lato 400 and 700 (see the two-font decision in section 4)
Hierarchy	Display XL 64, H1 40, H2 32, H3 22, H4 18, Body 16 at 1.7, Small 14, Caption 13
Icons	Lucide line, 1.75px stroke; no emojis in the identity
Photography	Purposeful, authentic, with the brand green tint
Buttons	Evergreen primary, outline secondary, text link; 8px radius, 44px minimum

Element	Approved specification
Cards	White, 1px Line, 12px radius, shadow sm
Backgrounds	White, Mist, Linen, Cream; Forest for emphasis
Accessibility	WCAG 2.2 AA minimum, AAA body text where possible
Image licensing	Recorded in the asset library before use (section 13)

1. What changes, and why

The platform code currently uses more than 45 different hex colours, including Tailwind and Bootstrap defaults, purples and two conflicting definitions of the same token names (globals.css and DESIGN-RULES.md disagree on `--sage-dark`, `--charcoal` and `--gray-soft`). This guide consolidates everything into **20 named colours**, **15 text styles**, **9 spacing steps** and **4 radii**.

Area	Today	Proposed
Primary green	#4a6347, #2A4A30, #2d5a3c, #2a6b3a, #166534 all used	**Evergreen** **#4A6347**, the website's button green (approved November 2026)
Hero green	#1A3220 to #2E5235 gradient	Kept exactly as on the website
Gold	#C9A84C used 92 times but not a token	**Gold** **#C9A84C** made official, with Gold Deep for text
Body text	#1C1C1C, #2c2c2c, #374151	**Ink** **#1C1C1C**, as on the website
Secondary text	#6b7280, #6B7D6E (fails AA at 4.4:1)	**Slate** **#4B5B4E** (7.2:1)
Sage Dark #5C8C56	Used for headings	Large text and gradients only (3.9:1 on white fails AA for body)
Purples #5a4a7a, #7c3aed	Onboarding voice step, onboarding guide	Retired as an AI colour and as bright violet. A deep, muted Purple (#584477) returns as a hub collection tone (section 3)
Gold text #8B6914, #7A5200	Inclusion AI labels	**Retired for AI in the platform** (6 November 2026): AI labels take the tool group's collection tone. Gold Deep #7A5200 stays for gold words on light grounds elsewhere (#8B6914 is borderline on Linen at 4.9:1)
Emojis	Nav tiles, card headers, resource pages	Replaced by one line icon set; emojis only in social captions
Photography	Shown untreated	Every photo carries the **brand green tint**
Smallest text	11px and 0.7rem in places	12px minimum (eyebrows), 13px for all other text
Playfair weight 800	Used in the hero but not loaded	Add 800 to the Google Fonts import

These are proposals. When approved, they become the tokens in globals.css and DESIGN-RULES.md, replacing both current versions.

2. Logo

The logo is a **circular Sage badge** with a black Playfair Display wordmark ("The Inclusion Edit"), the tagline "Capacity. Capability. Change." in a straight line, and a solid megaphone icon. Files are in the Logos asset group.

Version	Use
Main badge (wordmark, tagline, megaphone)	Website header and footer, documents, resources, slide title pages, social avatars
Short badge	Small placements, hero top right, favicons over 32px, watermark on lesson slides
White version (to produce)	Single-colour white badge outline and wordmark for photography and Forest where the Sage badge feels heavy
Single-colour Forest version (to produce)	One-colour print, embossing, partner co-branding
Vector masters (to request)	SVG and PDF of every version, so nothing is ever rebuilt from a PNG

Rules

- Clear space on every side equals the height of the "E" in "Edit". Nothing enters it.
- Minimum size: 64px wide on screen, 20mm in print. Below 64px use the short badge.
- Place on White, Linen, Cream, Mist or Forest. On photographs, place only over a calm area or a Forest overlay.
- Never recolour, stretch, rotate, outline, add shadows, gradients or effects to, crop the circle, or retype the wordmark.
- The logo should feel confident and understated: it never dominates the content.
- Never place the badge on Sage or Pale Sage: it disappears.
- In running text, write the name as **The Inclusion Edit** in the surrounding typeface. Do not use the logo as a word.

3. Colour

Core palette (taken from the new website)

Token	Name	Hex	RGB	CMYK (starting values)	Role
`forest`	Forest	#1A3220	26, 50, 32	48 0 36 80	Hero overlays, dark bands, mission panels
`deep-pine`	Deep Pine	#1E3624	30, 54, 36	44 0 33 79	Dark card gradient end, footer
`pine`	Pine	#2C4A31	44, 74, 49	41 0 34 71	Dark card gradient middle, split feature panels, stat tiles
`fern`	Fern	#3D6142	61, 97, 66	37 0 32 62	Dark card gradient start; **button hover** (always darker)
`evergreen`	Evergreen	#4A6347	74, 99, 71	25 0 28 61	**Primary action**: buttons, Join now, links, active states
`sage-mid`	Sage Mid	#6B8F71	107, 143, 113	25 0 21 44	Accents, borders, frosted tints; large text only
`sage`	Sage	#8DBF87	141, 191, 135	26 0 29 25	**Signature** logo green
`sage-light`	Sage Light	#E8F0E9	232, 240, 233	3 0 3 6	Light sage ground, frosted photo sections
`pale-sage`	Pale Sage	#E3F5E2	227, 245, 226	7 0 8 4	Reflection boxes, selected states
`mist`	Mist	#F4F7F4	244, 247, 244	1 0 1 3	Cool section ground
`white`	White	#FFFFFF	255, 255, 255	0 0 0 0	Cards, panels, text on dark
`linen`	Linen	#FDFAF5	253, 250, 245	0 1 3 1	Warm section ground, warm card gradient
`parchment`	Parchment	#FAF6EE	250, 246, 238	0 2 5 2	Warm gradient end
`cream`	Cream	#FFF6EA	255, 246, 234	0 4 8 0	Resource and print page ground
`sand`	Sand	#F3E9DD	243, 233, 221	0 4 9 5	Trust strips, quiet bands
`hero-cream`	Hero Cream	#F0E6C8	240, 230, 200	0 4 17 6	Hero headline words on Forest
`hero-mint`	Hero Mint	#A8D4B0	168, 212, 176	21 0 17 17	Hero headline accent words on Forest
`gold`	Gold	#C9A84C	201, 168, 76	0 16 62 21	**Insight accent**: fills, borders, rules, highlights on dark
`gold-light`	Gold Light	#E2C265	226, 194, 101	0 14 55 11	Gold words on dark green
`gold-deep`	Gold Deep	#7A5200	122, 82, 0	0 33 100 52	Gold text on light grounds (replaces Olive Gold #7A6A12)
`ink`	Ink	#1C1C1C	28, 28, 28	0 0 0 89	Primary text
`slate`	Slate	#4B5B4E	75, 91, 78	18 0 14 64	Secondary text (use instead of grey #6B7280)
`line`	Line	#DCE5DE	220, 229, 222	4 0 3 10	Borders and dividers

What changed from the earlier draft: the primary green is now the website's softer **Evergreen** **#4A6347** (was #2D5A3C, which lives on as the Green collection tone in the hub); hover goes darker to Fern, never lighter (the website's current lighter hover, #5C8C56, fails contrast with white text at 3.9:1); Mist, Ink and the gold text colour match the website; Pine, Deep Pine, Sage Mid, Sage Light, Parchment, Sand, Hero Cream and Hero Mint are added from the website.

CMYK values are direct conversions to start from. Confirm them with a printed proof on your printer's profile (for example Coated FOGRA39) before a large print run. Every app, page, deck and resource uses these exact values: never a slightly different green.

Functional colours

Token	Hex	Fill to pair with	Use
`success`	#1D6B3A	Pale Sage #E3F5E2	Saved, completed, correct
`warning`	#B54708	#FEF3E2	Check before continuing
`error`	#B42318	#FEECEB	Failed, invalid, required
`info`	#1E4E8C	#EAF1FB	Neutral notices

Never use colour alone to show state: always add an icon and words.

Category colours (Impact Platform signposting)

Colour works like road signs: it tells members which topic they are in, what kind of resource they are viewing and how topics relate. Each category has one accent family. Typography, core palette and components never change; only the accent does. The categories and colours are a proposal to agree before implementation.

Category	Token	Deep (labels, icons)	Tint (chips, headers)	Mid (decorative)	Deep on white	Deep on tint
Culture and belonging	`cat-culture`	#2D5A3C Collection Green	#E3F5E2	#8DBF87	8.0	7.0
Leadership and accountability	`cat-leadership`	#2F4A7A Indigo	#E8EDF7	#7C93C4	8.8	7.5
Policy and process	`cat-policy`	#1F5C73 Ocean	#E2F0F4	#5FA3BA	7.4	6.4
Anti-racism and equity	`cat-equity`	#9A4325 Terracotta	#FBE9E1	#E08A62	6.6	5.6
Disability and accessibility	`cat-access`	#5B3F73 Heather	#EFE8F5	#9E82B8	8.7	7.3
Learning and development	`cat-learning`	#8A2F4D Berry	#FAE6EC	#D27A95	8.1	6.8
Business case and evidence	`cat-evidence`	#6E5514 Bronze	#F7F0DC	#C2A25A	7.1	6.2

Inclusion AI is a feature, not a category. Inside the platform its tool groups take the hub collection tones like any other page; gold is limited to the small sparkle in the INCLUSION AI pill and Gold Light rings on dark grounds (section 12).

How to apply: a 4px band in the category Mid at the top of every card and thumbnail; the category name as a pill (Deep on Tint) with the category icon; the category icon in Deep in navigation and headers; chart series in category Mids. Never fill a page or large panel with a category colour: green stays the thread.

Colour vision: several of these hues look alike to people with colour vision deficiencies. That is acceptable only because colour is never the signal on its own: every category always shows its **name and its own icon**, and categories are also grouped and filterable by name.

Learning pathway scale

Progress through a module or programme moves from light, bright greens to deep greens, so members feel development as they go. It describes progress, not difficulty: the content never gets darker or heavier.

Step	Token	Fill	Number colour	Contrast
1 Start	`path-1`	Pale Sage #E3F5E2 with 1.5px Fern border	Ink	13.0
2	`path-2`	Sage #8DBF87	Ink	7.0
3	`path-3`	Fern #4A7C59	White	4.9
4	`path-4`	Collection Green #2D5A3C	White	8.0
5 Complete	`path-5`	Forest #1A3220	White	13.8

Use it for step markers, the programme progress bar and module headers. Pathways longer than five steps repeat the scale across stages. Every step also shows its number and a text label ("Step 3 of 5: Apply it").

Platform interaction and grouping colours (Impact Platform hub only)

This applies to the hub only, never the website. The hub keeps the agreed theme: the top menu, page backgrounds, fonts, buttons and the green thread do not change. Extra colour is used **only on boxes people interact with or that group content**: resource cards, tool pillars and sections, video and course cards, module and lesson cards, checklists, planners, frameworks and filters. Its job is wayfinding: it tells members which group they are in, what belongs together and where they are in a journey.

Colour supports navigation; it does not carry the identity. We use approved secondary colours to show categories, learning areas and resource types, but the brand is recognised through photography, typography, voice and the green thread. Colour is never the only cue: labels, icons and headings always travel with it. No section of the hub gets an entirely different palette of its own.

Rich at the top, pale inside. The hub works in three layers, agreed with the board and our business mentor:

Layer	What it covers	Colour
1. Headings and ordering	Course headers, collection headers, video series thumbnails, section openers	**Rich collection tones** (green, purple, amber, and blue once there are more sections), white text
2. Everything you click into	Lesson cards, chips, small buttons, box outlines, checklists, progress markers, tool pillars and boxes inside tools	**Pale tints** with Mid outlines and Deep labels
3. Reading text	Titles and body copy everywhere	Ink and Slate only

Rich tones give the hub weight and a premium first impression; pale tints keep the inside calm and easy to use. Deeper, more saturated colour reads as stronger and more effective, and lighter, softer colour reads as calmer and more pleasant (see the research below), so the two layers do different jobs.

Collection tones (layer 1)

Collection	Token	Rich header (start to end)	White text on start / end	Paired tint (layer 2)	Deep on tint	Mid (outlines, bands)
Green	`coll-green`	#2D5A3C to #3F6E4C	8.0 / 5.9	#E3F5E2	7.0	#8DBF87
Purple	`coll-purple`	#584477 to #6B5689	8.4 / 6.3	#EFE8F5	7.0	#9E82B8
Amber	`coll-amber`	#7E4F1C to #8F5F28	7.0 / 5.5	#F8EDE0	6.0	#D9A66A
Blue	`coll-blue`	#24497A to #33598A	9.1 / 7.2	#E8EDF7	7.8	#7C93C4

Headers are flat by default (approved November 2026). Use the start colour as a flat fill. Where a little depth helps, a subtle shift within the same colour is allowed: linear-gradient(135deg, start 0%, end 100%). Never blend one hue into another (purple into blue, for example): that is the look of a default AI interface, which the brand guardrails rule out. Both ends pass AA for normal white text, so nothing on the header can fall below 4.5:1 wherever it sits. These are slightly deeper versions of the green, purple and brown in the current hub: the current lighter gradient ends, the faded "01, 02" numbers and the white-on-translucent pills ("POLICY", "COMING SOON") are likely to fail contrast.

Rules for rich headers

- Titles, meta lines and numbers in **solid** White (or Cream). No translucent text.
- Pills on a rich header use the collection tint with Deep text (6:1 or more). "Coming soon" uses the Gold pill with Ink text.
- **Colour means something.** Each collection keeps one tone everywhere it appears (course header, its lessons, its videos, its certificates). Never alternate colours for variety, as the Foundation Lessons grid does now.
- **Dark does not take over a screen.** Rich headers are for courses, series and section openers. In a grid of individual lessons or videos, each card gets a **pale header** in its collection tint with a 4px band or chip in the rich tone. No more than about one row of rich headers in view at once.
- Section headings use brand icons in the collection Deep, never emoji.
- **Thumbnails: colour or photo, chosen case by case.** Video, course and module thumbnails can be either a flat collection-tone block or a relevant photograph with the brand green tint. Choose the photo when an image tells people what the content is about; choose colour when there is no strong image, or when a row needs to read as one calm set. Either way, the collection is always shown by **a 6px band in the rich collection tone along the top of the card or section**, so colour still separates the sections even when there is a photo underneath. Keep one choice per row or grid, so a set never mixes photo and plain colour cards at random.
- Up to four collection tones. A fifth needs a decision, not a new colour on the fly.

Topic chips inside cards. The category families below still label topics (Culture, Policy, Equity and so on) inside the white card body. On a rich header, use the collection tint pill instead, so the header stays calm and readable.

The nine pale families (layer 2). The seven category families plus two spare families for tools with more than seven groups. On library pages (Learn, Watch, Resources) a family means its category. Inside a single tool (a framework with nine pillars, a planner with stages) families simply tell groups apart, are assigned in the order below, and always carry the group's number, name and icon.

Order	Family	Deep (labels, chips, selected edge)	Tint (header, chip, selected fill)	Mid (band, resting edge, decorative)	Deep on white	Deep on tint	Ink on tint	Replaces in current hub
1	Culture (Collection Green)	#2D5A3C	#E3F5E2	#8DBF87	8.0	7.0	13.0	#2D5A3C pillar
2	Leadership (Indigo)	#2F4A7A	#E8EDF7	#7C93C4	8.8	7.5	12.7	#1E40AF pillar
3	Policy (Ocean)	#1F5C73	#E2F0F4	#5FA3BA	7.4	6.4	12.7	#0F766E pillar
4	Equity (Terracotta)	#9A4325	#FBE9E1	#E08A62	6.6	5.6	12.6	#92400E pillar, brown headers
5	Access (Heather)	#5B3F73	#EFE8F5	#9E82B8	8.7	7.3	12.4	#7C3AED and #6B21A8 pillars, purple headers
6	Learning (Berry)	#8A2F4D	#FAE6EC	#D27A95	8.1	6.8	12.5	#BE185D pillar
7	Evidence (Bronze)	#6E5514	#F7F0DC	#C2A25A	7.1	6.2	13.1	amber pillars
8	Moss (`group-moss`)	#3F5F14	#EEF5E0	#9DBB6A	7.4	6.6	13.3	#4D7C0F pillar
9	Sky (`group-sky`)	#1D5470	#E4F1F8	#6FAFD0	8.2	7.1	12.9	#0C4A6E pillar

Every Deep passes AA (4.5:1) for normal text on White, Linen and its own tint, and passes the 3:1 non-text minimum for a selected edge. Every Mid is below 3:1 on white, so Mid is **decoration only**: never text, never the only sign of a state. The current pillar colours are close in spirit; these versions are slightly softer, warmer and tuned to the brand greens so the hub reads as one family.

Anatomy of an interactive or grouped box

Part	Treatment
Card body	White, radius-md, 1.5px border in the family Mid at rest
Top band	4px family Mid (library cards and thumbnails)
Header	Family tint behind the title area when a card is expanded or open. Course and series headers above it use the rich collection tone (layer 1)
Number chip	Family Deep numeral on family tint, Raleway 700, at least 28px
Group label or eyebrow	Family Deep, Raleway 700, with the group icon
Title and body	Ink and Slate only. Never coloured body text
Checkboxes and toggles	accent-color set to the family Deep
Hover	Border moves from Mid to Deep, shadow-sm to shadow-md, 150ms
Selected, open or active	2px family Deep border plus a tick or "Open" label: never colour alone
Keyboard focus	The standard 3px Evergreen ring with 2px offset, whatever the family
Completed	Success tick and the word "Completed", in addition to any colour
Secondary text	Slate #4B5B4E (7.2:1). The grey #888 used in some tools is 3.5:1 and fails AA: replace it

Maturity frameworks and status scales use the learning pathway scale (Pale Sage to Forest) rather than a rainbow, because maturity is growth along one path. Each level shows its number and name ("Level 3: Embedding"). Use the nine families only where groups are separate topics, never for levels of the same thing.

Restraint rules. One family per box. Use colour to group only where grouping helps a decision; elsewhere stay green. On a screen with more than four families visible (for example a nine-pillar framework), the page ground stays White or Linen, everything else on the page stays neutral, and the families appear only on the boxes themselves. Calm grounds, a few rich headers and pale boxes inside are what make the hub feel premium rather than busy.

Why pale tints with deep accents: what the research says

Finding	What it means for the hub
Lightness and saturation shape emotional response more strongly than hue: brighter colours feel more pleasant, more saturated colours more arousing (Valdez and Mehrabian, 1994; Wilms and Oberfeld, 2018).	Pale, bright tints make large areas feel calm and pleasant; small amounts of saturated Deep create energy exactly where we want action.
In advertising, lighter colours increased liking through relaxation, and more saturated colours increased liking through excitement (Gorn and colleagues, 1997).	Use both on purpose: pale grounds to relax, deep chips, labels and edges to engage.
Calming screen colours (lighter, less saturated, blue) made pages feel quicker to load, which improved how people rated the site and how likely they were to recommend it (Gorn and colleagues, 2004).	The clearest research link from colour to recommendation. It supports her preference for pale boxes, alongside genuinely fast pages (progressive JPEG).
Hue, saturation and lightness all shape brand personality; blue is linked to competence, saturation and lightness strengthen or soften those traits, and purchase intent rises when colour fits the personality a brand claims (Labrecque and Milne, 2012).	Rich collection headers carry the premium, competent first impression; pale tints carry warmth and ease inside. Blue strengthens competence when it is added.
People infer stronger efficacy from more saturated colour (Labrecque and colleagues, 2025).	Deep, saturated labels on tools say "this works". Keep them small so they read as confidence, not shouting.
Visual appeal is judged in about 50 milliseconds and colours later judgements of trust and usability (Lindgaard and colleagues, 2006); simple, familiar designs are rated most appealing (Tuch and colleagues, 2012); attractive interfaces are perceived as easier to use (Kurosu and Kashimura, 1995).	An elevated feel comes from restraint and consistency: few colours per screen, one pattern used everywhere, generous white space.
Red in achievement settings was found to lower test performance (Elliot and colleagues, 2007), though later replications did not find the effect (Steele and colleagues, 2015 to 2017).	Treat as unproven, but keep red for errors only, not for scores, knowledge checks or maturity levels: nothing is lost.

Finding	What it means for the hub
People share things that give them social currency and practical value (Berger, 2013).	Word of mouth comes from usefulness and pride, not from a particular hue. Make outputs members share (action plans, certificates, summaries) look finished and branded.

Honest limits: most colour studies use students or a single culture, effect sizes are modest and meanings vary by context and culture. Colour supports clarity, speed and pride; it cannot replace them. Test the hub palette with a small group of members before rollout.

Proportion

On any page aim for roughly **60% light grounds** (White, Linen, Mist, Cream), **25% greens** (Forest, Evergreen, Sage), **10% Ink text**, and **no more than 5% Gold**. Gold is a seasoning.

Gradients

Gradients, shadows and effects are used with restraint. Only the gradients below are part of the brand, and none is ever used to give a feature its own look. Hub collection headers are flat (section 3); a gradient never blends one hue into another:

Name	Value	Use
Forest hero	linear-gradient(105deg, #1A3220 0%, #243D28 40%, #2E5235 65%) with a photo and a rgba(20,40,25,0.95 to 0.05) overlay	Website and platform heroes
Warm ground	linear-gradient(160deg, #FFFFFF 0%, #FDFAF5 60%, #FAF6EE 100%)	Website feature sections only (never used for Inclusion AI inside the platform)
Gold glint	linear-gradient(135deg, #C9A84C 0%, #E2C265 100%)	Highlighted headline words on Forest only. Retired as the Inclusion AI button
Dark card	linear-gradient(160deg, #3D6142 0%, #2C4A31 60%, #1E3624 100%)	Dark gradient cards, hub navigation tiles (same family of greens, never hue to hue)
Pale card	linear-gradient(160deg, #F7FBF7 0%, #EEF6EE 55%, #E2EFE2 100%)	Photo-top service cards and light feature cards
Frosted veil	rgba(232,238,230,0.93) over a blurred photograph	Frosted photo sections

Gradient text in Gold must sit on Forest. On light grounds, highlight words in Evergreen or Gold Deep instead.

Making gold accessible: bright Gold (#C9A84C) is never text on a light ground (2.3:1 on White, 2.1:1 on Parchment). That includes highlighted headline words such as "60 seconds" and "Let's find your path" on the website's light sections: on light grounds they become **Gold Deep #7A5200** (6.4:1 or more). Bright Gold and Gold Light stay for fills, borders, rules and highlight words on Forest or Pine.

Accessible pairings (WCAG contrast ratios)

Text	On White	On Linen	On Cream	On Mist	On Pale Sage	On Parchment
Ink	17.0	16.4	15.9	15.8	15.0	15.8
Forest	13.8	13.3	12.9	12.8	12.1	12.8
Pine	9.9	9.5	9.2	9.1	8.6	9.1
Fern	7.0	6.8	6.6	6.5	6.2	6.5
Evergreen	6.6	6.4	6.2	6.1	5.8	6.2
Slate	7.2	6.9	6.8	6.7	6.3	6.7
Gold Deep	6.9	6.6	6.5	6.4	6.1	6.4
Sage Mid	3.6 (large only)	3.5 (large only)	3.4 (large only)	3.4 (large only)	3.2 (large only)	3.4 (large only)
Gold, Sage	fail	fail	fail	fail	fail	fail

Text on dark	On Forest	On Pine	On Fern	On Evergreen
White	13.8	9.9	7.0	6.6
Hero Cream	11.1	7.9	5.6	5.3
Hero Mint	8.4	6.0	4.3 (large only)	4.0 (large only)
Gold Light	8.0	5.7	4.1 (large only)	3.8 (large only)
Gold	6.0	4.3 (large only)	3.1 (large only)	fail

The logo's black wordmark on Sage passes comfortably.

4. Typography

Three Google Fonts, each with one job.

Family	Token	Role	Weights
Playfair Display	`display`	Statements, hero and section headings, stats, quotes	700, 800; italic 400 for pull quotes
Raleway	`heading`	Card titles, labels, buttons, navigation, eyebrows	600, 700
Lato	`body`	Paragraphs, descriptions, forms, captions	400, 700

Fonts: keep all three (updated November 2026). The approved website uses Raleway for its navigation, eyebrows, card titles and buttons, and that is a large part of its polish, so the earlier recommendation to drop Raleway is withdrawn. Always switch on lining figures for Raleway (`font-variant-numeric: lining-nums`) so numbers in stats, forms and dates sit evenly.

Approved typefaces only. Every digital interface and learning material uses the approved brand typefaces. Default AI or system fonts and unapproved alternatives are never introduced; board feedback noted that the font in some areas made the platform feel like Claude rather than The Inclusion Edit. This makes the two-font decision above more urgent, because fewer families are easier to keep consistent.

Readability first: readable sizes (body 16px or more), a clear distinction between headings and body text, line height 1.7 for body, sufficient contrast, no unnecessarily decorative or hard-to-read typefaces (Playfair is for headings and statements only, never body or small text), and responsive text that stays usable on every device.

Fallbacks: Georgia for Playfair; system-ui for Raleway and Lato. In Canva and Word use the same three; if Playfair is unavailable use Georgia Bold.

Hierarchy

Style	Family	Size	Line height	Weight	Case
Display XL	Playfair	88px on heroes (fluid 44 to 88); 64px elsewhere	1.05	700 to 800	Title Case statement
Display L	Playfair	48px	1.1	700	Title Case
H1	Playfair	40px	1.15	700	Title Case
H2	Playfair	32px (fluid 26 to 32)	1.2	700	Title Case
Stat	Playfair	56px	1.0	800	Figures
H3	Raleway	22px	1.3	700	Sentence case
H4	Raleway	18px	1.35	700	Sentence case
Eyebrow	Raleway	12px, 0.16em tracking	1.4	700	UPPERCASE
Button	Raleway	15px	1.2	700	Title Case
Label	Raleway	14px	1.4	600	Sentence case
Body L	Lato	18px	1.75	400	Sentence case
Body	Lato	16px	1.7	400	Sentence case
Small	Lato	14px	1.6	400	Sentence case
Caption	Lato	13px	1.5	400	Sentence case

Rules: one Display style per view; never more than three type sizes in a card; left align everything except short centred statements and stat tiles; body line length 60 to 75 characters (720px max); never set paragraphs in Playfair or Raleway; never italicise Raleway; italics only for pull quotes; capitals only for eyebrows of four words or fewer. Never use weights below 400.

Dyslexia mode switches every family to OpenDyslexic with 0.05em letter spacing, 0.15em word spacing and 1.9 line height. **Large text mode** scales body to 18px. Both stay available on every platform page.

5. Buttons

Variant	Fill	Text	Border	Use
Primary	Evergreen	White	none	The one main action per view
Secondary	transparent	Evergreen	2px Evergreen	Alternative actions
On dark primary	White	Evergreen	none	Main action on Forest or photo heroes
On dark secondary	rgba(255,255,255,0.12) with 4px blur	White	1.5px rgba(255,255,255,0.4)	Second action on heroes
Inclusion AI	Evergreen (the Primary button)	White	none	Generate or run an AI tool. AI tools use the same buttons as the rest of the hub (approved November 2026)
Text link	none	Evergreen, underlined	none	Inline links; visited links stay Evergreen
Tertiary	none	Evergreen, Raleway 15px bold, no underline until hover, optional trailing arrow icon	none	Low-priority actions such as "View All"

Specs: Raleway 15px/700, Title Case, padding 14px by 28px (min height 44px), radius-sm (8px). Hover: Primary goes to Fern; Secondary fills Mist. Pressed: scale 0.98. Focus: 3px Evergreen outline, 2px offset (Gold Light on dark grounds). Disabled: Line fill, Slate text, not-allowed cursor, and helper text saying why.

Labels are verb first and 1 to 3 words: "Start Lesson", "Build My Case", "Book a Consultation". No decorative icons in buttons; a functional icon (download, external link) sits after the label.

Call to action sections: one per page section at most. Either a Forest band with a Display L line, one sentence and a White primary button, or a Linen panel with an H2, one sentence and an Evergreen primary button. Never two competing primary buttons.

6. Cards and panels

Card	Surface	Border	Radius	Shadow	Use
Content card	White	1px Line	12px	shadow-sm, shadow-md on hover	Resources, lessons, case studies
Feature panel	White on Mist or Linen	none	18px	shadow-lg	Pricing, coaching, highlights
Dark gradient card	Dark card gradient	none	18px	shadow-feature	Values, principles, gains, hub navigation tiles
Photo-top card	Photo, then pale card gradient	1.5px Sage Mid at 35%	18px	shadow-sm	Services, learning pathways, featured resources
Split feature panel	Photo half and Pine half	none	18px	shadow-feature	Expert support, featured offers
Inclusion AI card	White, as the Learn foundation card	1.5px collection Mid with a 6px band in the collection's rich tone	12px	shadow-sm, shadow-md on hover	AI tools: pale tint header, INCLUSION AI pill with a gold sparkle, You give / You get strip. No gold rule, outline or glow (approved 6 November 2026; full spec in section 12)
Reflection box	Pale Sage	none	12px	none	Pause and reflect prompts, workbook fields
Stat tile	White or Forest	1px Line on light	12px	none	One number, one line, one source
Dark band	Forest	none	0 or 20px	none	Section emphasis, quotes, closing calls to action

Anatomy of a content card (padding 24px): optional image at top (16:9, radius 12px top corners) or an icon; eyebrow pill; H3 title; one line of Small body text; footer row with metadata in Caption and one action. The whole card is clickable when it leads to one place; the visible title is the link text.

Not everything is a card. Mix full-bleed photography, editorial text columns, pull quotes, stat rows and cards so pages have rhythm. Two consecutive sections should rarely share the same layout.

Avoid: coloured left-border content cards, grids of identical icon or emoji cards, cards with more than one primary button. The one exception is the platform **section opener** (section 12), where a 4px left border in the collection colour is approved.

7. Icons, symbols and emoji

One icon system: Lucide line icons, 1.75px stroke, rounded caps and joins, at 16, 20 or 24px (32px for area and feature icons). Never mix outline icons, filled icons, emojis and decorative symbols. Commission bespoke icons only where Lucide has no clear match, drawn to the same stroke and grid.

- Colour: Evergreen or Slate on light grounds; the area Deep colour inside a learning area; Sage, Gold or White on Forest.
- Use icons only when they improve understanding or navigation, and pair them with a visible text label wherever the meaning is not universal.
- Meaningful icons have an accessible name; decorative icons are hidden from screen readers. Icon buttons are at least 44 by 44px.

No emojis in the professional identity. Emojis are not used in website headings, platform navigation, resource cards, training materials, lessons, presentations, reports, branded graphics, calls to action, or section and category labels. They make a considered brand look assembled rather than designed. The emoji nav tiles and card icons on the platform have moved to the icon set. **Exception:** the icons already on the current website pages are part of the approved website look and stay as they are unless Rebekah asks to change them (see Two looks, one brand).

Emojis may appear only in **social media captions**, sparingly. There, skin-relevant emojis use the medium-dark skin tone modifier as the default (🤝🏽 ✊🏽 👆🏽) as real Unicode, and 🌿 remains the sign-off.

Lesson imagery set (fixed positions per the 12-slide template): chalk blackboard title (slide 1), topic icons from the icon set (2 and 3), hook image (4), scenario images (5 and 6), open notebook and pen (7), blurred research papers (8), ticked notepad (9), sealed envelope with The Inclusion Edit stamp (12).

---

8. Layout and spacing

- **Container:** 1100px max, centred, 24px side padding on mobile, 32px on desktop.
- **Grid:** 12 columns, 24px gutters. Cards sit 3 across on desktop, 2 on tablet (below 900px), 1 on mobile (below 767px, where the hamburger menu appears).
- **Spacing scale:** 4, 8, 12, 16, 24, 32, 48, 64, 96px. Nothing in between.
- **Section rhythm:** 96px top and bottom on desktop, 64px tablet, 48px mobile. Alternate White, Mist and Linen grounds; use one Forest band per page for emphasis.
- **Density: spacious, never sparse** (Rebekah's standing preference, November 2026). Space should make a page calm and easy to scan, but platform pages are working tools: members need to see enough at once to choose and act. Space generously **between** sections and keep it tight **inside** components.
- **Website:** keeps its airy rhythm (96px between sections) because it tells a story.
- **Impact Platform:** a calmer, more compact rhythm: about 40 to 56px between sections, 24px between cards, 16 to 24px padding inside cards and panels, 8 to 12px between related lines.
- **Boxes fit their content.** No empty space at the bottom of a panel. When boxes sit side by side, match their heights by trimming the taller one (shorter copy, smaller inner padding), never by padding the shorter one.
- **Text inside cards and panels:** 14 to 15px body and 21 to 25px panel headings. Tighten padding and gaps before shrinking text, and never go below 13px text or 44px touch targets.
- **Check the first screen.** On a laptop, the hero plus the start of the content (the strip and the first panels or cards) should be visible without a long scroll. If a page feels bulky, reduce inner padding first, then trim copy.
- **Hero:** minimum 560px tall (700px on the homepage), left-aligned text column of 560px, eyebrow pill, Display XL statement, Body L lead, two buttons, short badge top right.
- **Dashboard:** Mist ground, White panels at radius 12 or 20px, sticky top nav, active tab as a filled Pale Sage pill with an Evergreen outline.
- **Lessons:** 16:9 slides, one idea per slide, maximum 5 to 6 lines, never two consecutive slides in the same format.
- **Resources and PDFs:** A4, Cream ground, 20mm margins, logo top left on page one, footer with page number and "theinclusionedit.com", fillable fields in Pale Sage boxes.
- **Social:** 1080 by 1350 (LinkedIn and Instagram portrait), 1080 by 1920 (stories and TikTok). Statement on Forest or Sage, logo bottom right, half photo and half text layouts for founder posts.

---

9. Imagery

Every image must contribute to the story being told. Photography is one of the most important parts of the brand: choose images that communicate the subject itself, not images that simply fill space. A rugby scrum says performance; the Wright brothers or Concorde say innovation; a lightbulb says nothing.

Photography: real people in genuine situations, collaborating, thinking, learning, creating and challenging ideas; candid, expressive and contemporary; different generations, backgrounds, identities and experiences represented naturally, with people shown as individuals and never as symbols of a protected characteristic. Use our own photography of Rebekah and the team wherever possible.

Photography leads; colour supports. Board feedback was clear that purposeful imagery engages people more than coloured sections alone, and that people judge what content is about from what they see. One strong, relevant image is often enough; imagery does not need to be everywhere.

Area	Imagery guidance
Learning modules	A relevant image or visual at the start of a learning experience, where it adds meaning
Video library	A considered thumbnail for every video: a tinted photo that shows the subject, or the flat collection tone where no strong image exists, always with the 6px collection band on top
Resource library	Relevant imagery used selectively, so resources are easier to recognise and explore
Inclusion AI tools	The standard brand components and a photo hero of people at work; the hero carries the frosted glass badge (section 12)
Website	Photography that shows the people, purpose and impact behind the brand

Imagery always reflects the subject and message, represents people and experiences authentically, feels contemporary, natural and human, and has a clear purpose. Never generic corporate stock, and never tokenistic or stereotypical representations of marginalised groups.

The mix: authentic photography first, then editorial imagery, relevant historical photographs, illustrations or diagrams where they explain better than a photo, and bespoke branded compositions. Do not repeat the same image across sections.

The brand green tint

Every photograph carries a soft green gradient so images from different sources feel like one family and connect to the palette.

Use	Treatment
Standard tint (all photos except heroes)	`linear-gradient(160deg, rgba(141,191,135,0.18) 0%, rgba(45,90,60,0.28) 100%)` laid over the image: Sage at 18% top left to Evergreen at 28% bottom right
Hero overlay (photo behind text)	The Forest hero gradient: `linear-gradient(100deg, rgba(20,40,25,0.95) 0%, rgba(20,40,25,0.85) 38%, rgba(20,40,25,0.3) 70%, rgba(20,40,25,0.05) 100%)`
Archive duotone (historical photos)	Convert to greyscale, then apply the standard tint, so old and new images sit together
Canva and slides	Place a rectangle over the photo with a linear gradient from #8DBF87 to #2D5A3C at 160 degrees, transparency about 75% (Sage end) to 70% (Evergreen end)
Print and PDF	Bake the tint into the exported image file before placing it

Rules: keep the tint light enough that skin tones stay true; never tint faces green or grey; never stack the standard tint under the hero overlay; logos, screenshots, diagrams and partner imagery are not tinted. See the comparison in the Imagery assets and the TintedImage component.

Visual metaphors:

Subject	Show	Instead of
Leadership	Decisions, complexity, taking responsibility	A suit at the head of a table
Culture	Everyday environments, behaviours and systems	A logo wall
Belonging	Genuine connection, participation, recognition	Hands in a circle
Fairness	Access, opportunity, barriers removed	Scales of justice
Innovation	Real invention, experimentation, prototypes	A lightbulb
Performance	Teamwork and collective achievement	A rising arrow
Progress	Movement, development, transformation	A staircase graphic
Accessibility	Inclusive design in use	A wheelchair symbol alone
Anti-racism	History, lived experience, institutional change	Clasped hands of different skin tones
Intersectionality	The interconnected complexity of real lives	A Venn diagram of identities

AI-generated people are not a default substitute for photography. Use them only when convincing, non-stereotypical and clearly better suited than a real photograph.

Rights: every image is licensed or cleared, with attribution and usage rights recorded, before it is published.

Avoid: generic office stock, staged handshakes, people pointing at laptops, lightbulbs, puzzle pieces, rainbows as shorthand for inclusion, diverse line-ups smiling at camera, overly polished artificial images, blurry crowds and cold blue offices.

Technical: every photograph is saved as a **progressive JPEG**, so a full low-resolution version appears straight away and sharpens as it loads, instead of drawing slowly from the top. Before an image goes live: maximum 1600px on the long side, quality 75, metadata stripped, progressive encoding, under 300KB. With ImageMagick:

```
convert "$f" -resize "1600x1600>" -quality 75 -strip -interlace Plane "$f"
```

Check a file is progressive with `identify -verbose "$f" | grep Interlace` (it should say JPEG or Plane, not None). In Photoshop, Export As or Save for Web with Progressive ticked; Canva exports should be re-saved through this step before upload. Logos, icons and graphics with flat colour or transparency stay SVG or PNG; screenshots with text stay PNG. Every image has alt text that says what it shows and why it is there; decorative images use empty alt text.

Photography shoot brief (for commissioned shoots)

Commissioned photography is the strongest way to look expert and warm at once. Brief every photographer with:

- **Who:** Rebekah and the team at work (facilitating, listening, presenting, thinking), plus real clients and members with written consent. Mix of ages, ethnicities, genders, body types and visible and non-visible disability.
- **Where:** recognisable workplaces, training rooms, staffrooms, community spaces, Bermuda and UK locations.
- **Moments:** mid conversation, a question being asked, a workshop exercise, notes on a wall, a one to one, a laugh, a moment of reflection.
- **Light and style:** natural, warm daylight; shallow depth of field; candid over posed; room around subjects for text.
- **Shot list per session:** wide (setting), mid (interaction), close (hands, notes, faces listening), portrait (founder and team, both formal and relaxed), landscape and portrait crops, some with clear space on the left for hero text.
- **Deliver:** colour-corrected originals (the tint is added in design), model releases, and usage rights for web, print, social and advertising.

Illustration and diagrams

Use illustration only where it explains better than a photo: frameworks, processes, journeys. Flat shapes in brand and category colours, line weight matching the icon set (1.75px at 24px), rounded corners from the radius tokens, labels in Raleway or Lato. No cartoon characters, no faces, no clip art.

Graphic language

Structure and recognition, never decoration for its own sake:

- **Circles, pills and arcs** drawn from the badge and eyebrow pills, as framing devices and section motifs (see the cover of this system).
- **Editorial headings** with generous space; oversized Playfair numerals for numbered sections.
- **Section dividers:** a single Line hairline, or a 48px Gold rule under an eyebrow.
- **Pull quotes** in Playfair italic with a Sage quote mark (PullQuote component).
- **Callout boxes:** Pale Sage for reflection, functional tints for notices, the INCLUSION AI pill (not a Gold border) for AI content.
- **Timelines, process diagrams and data visualisations** in brand and area colours, labelled directly, sourced in a line.

---

10. Accessibility standards

The Inclusion Edit is an inclusion brand: **accessibility is a design requirement, not an optional enhancement.** Every visual decision considers people with different abilities, access requirements and learning preferences: colour contrast, typography, readability, image descriptions, captions, audio controls, responsive layouts and the ability to understand information without relying on colour. The visual identity is tested with members and refined in response to genuine accessibility feedback.

- **Standard:** WCAG 2.2 Level AA minimum on every page and resource; AAA contrast (7:1) for body text wherever the pairing table allows.
- **Contrast:** text 4.5:1; large text (24px, or 18.5px bold) 3:1; icons, input borders and focus rings 3:1.
- **Text:** avoid long dense paragraphs, excessive italics and capitals; body never below 16px; nothing below 13px except 12px uppercase eyebrows; text resizes to 200% without loss.
- **Keyboard:** every action reachable by keyboard; visible 3px focus ring; logical tab order; skip link to main content.
- **Targets:** at least 44 by 44px.
- **Motion:** respect reduced motion; no autoplay with sound; nothing flashes more than three times a second.
- **Forms:** visible labels (never placeholder only), helper text, errors in words and colour with an icon.
- **Media:** captions on every video, transcripts for podcasts, text-to-speech on lessons.
- **Structure:** one H1 per page, headings in order, landmarks, descriptive link text (never "click here").
- **Documents:** tagged PDFs with reading order, alt text and real form fields; Word files using heading styles.
- **Modes:** reading preferences are available on every platform page (below).
- **Language:** plain English, terms defined where they appear.

Reading preferences (every platform page)

A Reading preferences control sits in the top navigation on every page, not only the dashboard, and remembers each member's choice:

Control	Options
Text size	Standard (16px body), Large (18px), Extra large (20px)
Font	Brand fonts, or dyslexia-friendly (OpenDyslexic)
Line spacing	Standard (1.7), Relaxed (1.9), Extra (2.1)
Contrast	Standard, or high contrast (Ink on White everywhere, tints and tint overlays off)
Motion	Follow device setting, or reduce all motion
Audio	Text-to-speech and video playback speed 0.75x to 2x

Layouts must hold at every combination, and at 200% and 400% browser zoom.

Testing

Test every new template with automated contrast checks, keyboard-only use, a screen reader (VoiceOver and NVDA), 320px mobile width and 200% zoom, and, before launch, with real members with different access needs, including dyslexic and neurodivergent users and people with low vision.

11. Data visualisation and research graphics

Evidence is central to the brand, so it must look credible, not like an infographic template.

- **Simple chart types:** bar, line, stacked bar for parts of a whole, and the stat tile. No 3D, no pie charts with more than three slices, no decorative icons standing in for data.
- **Colour:** one series in Evergreen; comparisons in Evergreen and Sage; categories in the category Mids; highlight one value in Gold. Grid lines in Line; axis text in Slate at 13px or more.
- **Label directly** on bars and line ends rather than in a legend; never rely on colour alone.
- **Honest proportions:** bar axes start at zero; never stretch scales to exaggerate differences.
- **Source line** under every chart in Caption style ("Source: CIPD, 2025"), plus a one-sentence takeaway above it.
- **Accessible:** a text description or data table available for every chart.

12. Platform patterns: resources, progress and navigation

The platform page template (approved November 2026)

The board's preferred pages are **Onboarding** (the overall vibe) and **Learn** and **Watch** (the browsing feel). Every platform page now follows the onboarding pattern: a photographic hero that carries the same feel as the website, then calm, organised content below. Learn, Watch and every other hub page gain a hero image.

Page anatomy, top to bottom

Part	Specification
1. Photo hero	Full-bleed photograph relevant to the page, under the Forest hero overlay (Forest at 90% on the text side fading to 45%). **Full hero** (programme and landing pages such as Onboarding): about 520px tall. **Compact hero** (Learn, Watch, Apply, Make the Case, Inclusion AI, Dashboard): about 400px tall, as on the approved Learn page.
Hero content	Left aligned in a 640px column. "Back to dashboard" as an on-dark ghost button; an outlined eyebrow pill (White at 40% border, uppercase, for example "INCLUSION FOUNDATIONS"); a Playfair Display XL headline in White; one or two lines of intro in Lato 18px White; a meta row (time, number of items, certificate) with **line icons in Cream, never emoji**. Optional: one input or one primary action. The circular logo badge sits top right on full heroes only.
2. Progress or filter strip	A White band directly under the hero. On programmes: "Your progress: 0 of 12 items complete", the percentage, an 8px Evergreen progress bar and the collection pills (outlined in each collection's Deep with its icon and count, for example "Watch 0/4"). On library pages (Learn, Watch): the collection pills, the search field and the topic filter chips.
3. Orientation panels	Optional two-up row: a White note card (the human voice, signed "The Inclusion Edit") beside a Forest panel for key messages (for example "What this programme is not", with Gold outline icons). Short callouts below use functional tints with an icon, never emoji.
4. Section openers	One per collection: a pale tint panel in the collection colour with a **4px left border in the collection's rich tone**, an icon, an H2 title, one line of description and, on programmes, the count ("0/4 complete") on the right.
5. Card grids	Four across on desktop. Photo cards (tinted photo, a "Watch 1" style label on a dark scrim, an optional status pill) or flat collection-colour cards, one choice per row, with the 6px collection band. Title in Raleway, duration with a clock icon, then actions: one primary, one secondary, one icon button with an accessible name.
6. Closing call to action	A Forest band with a Playfair headline, Gold Light highlight words ("Find out in 60 seconds."), one sentence and one action. A same-colour Forest to Evergreen shift is allowed; nothing hue to hue.

Everything else stays as agreed: top menu, Mist and White grounds, fonts, buttons, the three colour layers and the green thread.

The approved reference page: Learn (6 November 2026). Rebekah signed off the Learn page as the standard for every library page in the hub. Copy these exact settings:

Element	Learn page standard
Page width	Content and strip containers 1200px wide, matching Onboarding
Hero	About 400px tall; photo positioned so the people actually doing the learning are visible (on Learn, object-position centre 64%); Forest hero overlay; headline in Hero Cream with Hero Mint accent word ("Explore Courses."); one line of value-led intro; meta row with Cream line icons
Filter strip	White, 1px Line below; pathway pills (1.5px border and text in the collection tone, icon, jump to their section); search on Mist with a search icon; topic chips (selected = Evergreen fill, White text)
Foundation lesson cards	Four to a row (minimum 260px each); 6px collection band on top; pale collection tint header with book icon and "Foundation lesson"; completed state is a tick plus **"Done"** in an Evergreen pill (screen readers hear "Completed"), and the header wraps rather than cutting the pill off; topic chip, clock icon and duration at the foot
Section opener	Pale collection tint, 4px left border in the rich tone, 22px icon, H2 in the collection tone with "2 courses" on the same line; padding about 15px by 22px
Course cards	18px radius; flat rich header (padding about 11px by 22px), Playfair title at about 19px, meta line in White; compact body with the description and a "Show modules and lessons" toggle; **about 26px between course cards** and about 44px between pathways
Module boxes	Pale tint header with a White number chip, "Module 1" eyebrow, title, lesson count and Certificate pill; lesson rows at least 44px with Slate numbers; "Coming soon" as a Gold pill with Ink text

Inclusion AI: how AI tools are marked (approved 6 November 2026)

The principle: AI tools belong to the hub. They are marked by **what they do**, not by a separate colour. Gold is retired as a background, border, outline or glow for AI tools: following Rioh's board feedback and Rebekah's review of the redesigned page, gold backgrounds read as mustard, and gold outlines and glows looked like add-ons that did not match Learn, Watch or the glossiness of the website.

Element	Standard
Colours	Tool groups take the hub collection tones, exactly as on Learn and Watch: **Making the Case green, Recruiting and Hiring Fairly purple, Understanding Where You Are blue**. Section openers, filter pills, card bands, header tints and taglines all use the group's tone
The AI marker	The **INCLUSION AI pill**: White pill, uppercase Raleway 700 at 11px with 0.08em tracking, text in the group's rich tone, and a small **gold sparkle** icon (Gold #C9A84C, 13px, 2px stroke) before the label. The sparkle is the only gold on a tool card
Tool card	Identical to the Learn foundation card: White body, 1.5px border in the group Mid (rich tone on hover), 6px top band in the rich tone, 12px radius, shadow-sm, then shadow-md and a 2px lift on hover. Pale tint header with the tool's line icon in a 44px White circle on the left and the INCLUSION AI pill on the right. Body: Raleway title in Ink, tagline in Lato 700 in the group's rich tone, the You give / You get strip, then "Open Tool" in Evergreen with a chevron
You give / You get	Replaces the long description on the card (the description stays behind the scenes for search). A Line hairline above, then two rows, each with a 28px tint circle and icon (clipboard for You give, sparkle for You get), an uppercase Slate label and one plain line in Ink. For example: You give "A job description"; You get "An equity review with rewritten wording ready to use". Each line comes from the tool's own description and never promises more than the tool does
Hero	The standard compact photo hero, with people at work at a screen. Outlined eyebrow pill with a White at 40% border (not Gold) and the sparkle; headline "Explore AI Tools." in Hero Cream and Hero Mint; meta row with the number of tool groups and "Built for EDI practitioners"
Hero glass badge	Bottom right of the hero, modelled on the award card on the website About page: a 240px frosted card (Forest at 45%, 10px blur, 1px White at 28% border, 18px radius, soft dark shadow). Inside, centred: a 64px **Gold Light ring** with the tool count in Playfair Gold Light and a soft glow; "INCLUSION AI" eyebrow in Hero Cream; "Specialist AI Tools" in Playfair White; "Purpose-built for inclusion work"; a White hairline; "EVIDENCE-BACKED" with the sparkle in Gold Light. Hidden below 1024px so it never covers the headline. The count is calculated from the tools listed, never typed in
Orientation (top of page)	As on Onboarding, above the first tool group and hidden while searching. **Row 1, two boxes of equal height:** a White note card ("A NOTE FROM THE INCLUSION EDIT", Playfair H3 "How we built Inclusion AI.", two short paragraphs on specialist-designed tools built for one job and not needing to write prompts, signed "The Inclusion Edit" in Evergreen) beside a dark card gradient panel ("HOW IT WORKS" with the sparkle, "Three steps to a strong draft." in Hero Cream and Hero Mint, three steps in 32px Gold Light rings: Tell us your context; The tool does the groundwork; You get a draft to check and adapt, which also says it is not legal advice). Compact: about 24 by 28px padding, 14 to 15px body. **Row 2, two callouts:** "No personal details needed" (Pale Sage, lock icon) and "Your content stays yours" (blue tint, shield icon, naming Anthropic's no-training terms and 30-day default deletion). Keep every privacy line true: update it if the platform starts saving tool inputs

Where gold still lives on AI pages: the small sparkle in the INCLUSION AI pill, and Gold Light rings and sparkles on dark grounds (the hero badge and the How it works steps). That is all.

Never: gold, Linen or Parchment backgrounds on AI cards or sections; gold outlines, rules or glows around cards; gold text on light grounds; a separate AI colour; emoji icons.

On the website: the gold "AI tools" stat ring stays as it is. Its number must match the number of tools in the platform (the platform lists 9; the website currently says 15, to be resolved).

Fix before rolling the template out (seen in the current pages):

- Replace every emoji (book, clapperboard, target, eye, thought bubble, trophy, clock) with the brand line icons.
- "Recommended" pills in White on Gold fail contrast (about 2.3:1): use Ink on Gold (6.5:1).
- Disabled "Coming soon" buttons need Slate text on Line (5.6:1) plus the words, not pale grey on grey.
- Faded numbers and translucent text on coloured headers become solid White.
- The current Foundation Lessons grid alternates dark green and purple for no reason: move it to photo cards or flat collection cards with the band.
- Remove dashes used as punctuation from copy (for example in the Pronouns and Language card description).
- Every photo goes through the progressive JPEG step and the green tint.

The platform should feel like a modern digital learning publication, not a set of PDFs. Each resource type has its own layout:

Resource type	Treatment
Reflective exercise	Prompt in H4, Reflection boxes with labelled fields that save to the member's profile
Case study	Narrative layout: context, what they did, what changed (stat tiles), pull quote, how to apply it here
Research summary	Headline finding as a stat tile, three evidence highlights, chart, short sources list
Practical guide	Numbered steps with oversized numerals, examples in callouts, interactive checkpoints
Knowledge check	One question per view, large tappable answers, inline explanation in Pale Sage, everyone moves forward
Template	Preview image, what it is for, how long it takes, one Use Template action
Video lesson	16:9 player with tinted poster frame, captions on, transcript below, chapter list

Interactive and grouped boxes (cards, pillars, modules, videos, tools) follow the platform interaction colours in section 3: rich collection headers, then pale tint, Mid edge, Deep label, white body inside.

One learning layout, subtle signposts. Every learning experience follows the same underlying layout, so members recognise the structure and navigate with confidence. Each learning area may carry subtle visual distinctions, like road signs: its collection tone, its icon, its opening image and the pathway progress scale, so people know where they are, what the subject is and how far they have come. Differentiation is purposeful and consistent: it helps orientation and never makes a module feel like a separate product or brand.

Progress and navigation indicators (one consistent set, styled in the brand, never generic software components):

State	Indicator
Completed	Evergreen circle with a white tick, plus the word "Completed"
Current position	Pathway step marker with a 3px Evergreen ring and 2px offset, plus "You are here" for screen readers
Not started	Pale Sage step marker with Fern border
Locked	Line fill, lock icon in Slate, helper text saying how to unlock
Saved or bookmarked	Lucide bookmark icon, filled in Evergreen when saved, with "Saved" label
Programme progress	8px pill bar on Line, filled in Evergreen, with the percentage and "3 of 5 lessons" in text
Next step	One Linen panel at the end of every lesson: "Up next" eyebrow, title, one button
Breadcrumb	Slate Small text, current page in Ink, chevron icons

13. Asset library and licensing

One central library holds every approved asset so no one rebuilds the brand from memory. Organise it by purpose: Website, Impact Platform, Consultancy, Training, Social media, Podcast, Research and reports. It holds approved logos (vector and PNG), this colour and type reference, font files or links, approved and tinted photography, the icon set, graphic elements, and templates for social posts, presentations, resources and web components.

Every image is logged before use with: source, photographer or creator, licence or permission, attribution required, approved usage, restrictions, and expiry date where relevant. Never assume an image found online is free to use.

14. Quality checklist

Before publishing anything, ask:

1. Does it look recognisably like The Inclusion Edit, even without the logo?
2. Does it use only approved colours and type styles?
3. Is every image authentic, relevant, tinted and licensed?
4. Is the layout balanced, with one clear action?
5. Does it pass contrast, keyboard and screen reader checks?
6. Are icons from the one set, with no emojis?
7. Is it easy to navigate and signposted by category and progress?
8. Does every ask (email, booking, pathway question, membership) state its value first?
9. Does it make the business case visible for leaders and managers?
10. Does it avoid generic, templated or AI-generated design?
11. Is it polished enough to represent a premium consultancy?
12. Does it reuse existing components, rather than introducing a new style for one feature?
13. Would anyone mistake any part of it for a default AI template or interface?
14. Does the imagery tell people what the content is about, with colour only supporting navigation?

Do not publish something because it looks acceptable. Publish it because it meets the standard.

---

15. Designing for value and conversion

Buyers do most of their research before they speak to anyone, so pages must show value, prove it and make the next step easy without us in the room. Every pattern below shows the reader **what they get** before asking for anything. (Research behind this: the Brand World, "Value first".)

Value-led page anatomy

1. **Outcome headline** in the reader's words (Display or H1), with a one-line sub-headline on how we help.
2. **Proof within the first screen:** a stat tile, a named sector or a short testimonial.
3. **The business case:** two or three stat tiles in the leader's terms (cost of turnover, performance, absence), each with its source line.
4. **What you get:** three to five specific outcomes, each with an icon from the set, not a feature list.
5. **One primary action**, repeated at the end of the page, with a low-risk alternative ("See a sample lesson").
6. **Objections answered:** budget, time, leadership buy-in, political climate, in a short FAQ.

Asking for information

Pattern	Design rules
Email capture (ValueForm)	Value statement above the field in H4, one line on what arrives and when, two fields at most (first name, work email), outcome button ("Send Me the Template"), one privacy line in Caption, a preview image of the resource
Pathway selector	One question per screen, large tappable cards (min 64px tall) with an icon, the option name and one line on what that path gives; a progress line ("Question 1 of 2"); a visible "Skip and browse everything" link
Booking a call	What the call covers and what they leave with, the length, who they'll speak to (photo and name), calendar embedded on the page
Multi-step forms	Use only when more than five fields are genuinely needed; show progress; save answers between steps
Confirmation screens	Confirm in one line, then offer the next most useful step, never a dead end

Every field has a visible label; helper text explains why we ask. No pre-ticked consent boxes. Opt-outs are neutral ("Not now").

Pricing and plans

- Three tiers at most, side by side on desktop and stacked on mobile, with the recommended tier marked by a Pale Sage "Most popular" pill and a 2px Evergreen border.
- Each tier leads with who it's for and the outcome, then what's included as a short ticked list.
- Show the full price and what it covers; no hidden fees; cancellation terms one click away.
- A business case line beneath the table where it's honest, for example comparing membership with the published cost of replacing one employee.

  Internal note: placeholder prices, review before launch. The prices currently on the Impact Platform (Individual Practitioner £249 a year; Growing Teams, up to 500 employees, £2,400 a year, marked "Most chosen"; Established Organisations, 501 to 2,000 employees, £4,800 a year) are used in examples as placeholders. Following the November 2026 business meeting with Sean, prices are to be reconsidered and likely raised. Update this guide, the Brand Voice Guide and the platform pricing page together once new prices are agreed.

Business case components

- **Stat tiles** carry the business case (section 6), always with a Caption source.
- **Cost of turnover calculator** (to build): inputs for headcount, average salary and turnover rate; output in a large stat tile using Gallup's published range, labelled as an estimate, with a "Share with your leadership team" action.
- **Shareable summaries:** one-page business case PDFs and slides in the brand templates, designed for the practitioner to forward to the person who signs off.

Accessibility is part of the business case

Accessible design is conversion design. Disabled shoppers who click away from inaccessible UK websites represent an estimated £17.1bn in spending power (Click-Away Pound Survey, 2019). Every value pattern above must pass the accessibility standards in section 10.

Never

Countdown timers or fake scarcity, hidden costs, pre-ticked boxes, guilt-tripping opt-outs, pop-ups that block content on arrival, or forms that ask more than the value requires.

16. Motion

Motion is quiet and purposeful: it confirms an action or guides attention, never decorates.

- Durations: 150ms for hovers and presses, 200 to 250ms for panels and modals, 300ms maximum for page elements entering.
- Easing: ease-out for entering, ease-in for leaving. No bounce or elastic effects.
- Allowed: fades, short slides (8 to 16px), progress filling, a gentle lift on card hover.
- Never: autoplaying video with sound, parallax that moves text, looping animations, anything that flashes.
- Respect reduced motion everywhere: switch to instant changes when the member or their device asks.

17. Performance and polish

Speed and polish are competence signals. A slow, broken or inconsistent page undermines expertise before anyone reads a word.

- Pages load their main content within 2.5 seconds on a typical mobile connection; every photograph a progressive JPEG under 300KB with width and height set to avoid layout shift; images below the first screen lazy-loaded; fonts limited to the weights in this guide.
- No broken links, placeholder text, lorem ipsum, missing images or test content in anything public.
- Consistent spacing, alignment and capitalisation on every page: inconsistency reads as carelessness.
- Every form confirms success and handles errors in plain words.
- Client logos appear in a single row, in Slate at equal visual size, only with written permission.

18. Templates

Build these once from this system so new materials are fast and consistent:

Template	Format	Key specs
Presentation	16:9, 1920 by 1080	Title slide on Forest with badge; statement slides; stat tiles; tinted photo slides; max 6 lines a slide
Report and research	A4 portrait	Cream cover with Playfair title, numbered sections, pull quotes, charts with sources, tagged PDF
Resource or workbook	A4, interactive PDF or platform page	Cream page, Pale Sage fields, category chip, page footer with URL
Proposal	A4 or web page	Ink text, Evergreen headings, outcomes table, pricing table, testimonial, next steps
LinkedIn carousel	1080 by 1350	Hook slide on Forest, one idea per slide, logo bottom right, last slide with one action
Instagram post and story	1080 by 1350 and 1080 by 1920	Statement on Forest or Sage, tinted photo, safe margins of 120px top and bottom on stories
Quote card	1080 by 1350	PullQuote style on Linen or Forest, attribution, logo
Email newsletter	600px wide	Logo header, one story, Resource of the Month card, one button, accessible plain text version
Podcast artwork	3000 by 3000	For the Love of EDI title in Playfair, badge, tinted guest photo, legible at 100px
Video	1920 by 1080	Branded title card, Forest lower thirds with name and role, captions always on, end card with one action
Certificate	A4 landscape	Linen ground, Playfair name, module title, Gold rule, badge, date
Email signature	Text based	Name, role, The Inclusion Edit, website, one link; no image-only signatures

19. Applying the system

Surface	Must use	Notes
Website	The current website pages as the template: Forest hero, Playfair headings, real photography and the glossy website finish (Two looks, one brand)	Most expressive application. Keep existing designs; change wording and broken links only unless Rebekah asks. Never use hub patterns
Impact Platform	The platform page template (section 12): photo hero, progress or filter strip, section openers, card grids. Mist and White surfaces, collection colours, Pale Sage active pills, Gold only as small accents (the AI sparkle, Gold Light rings on dark grounds, Coming soon pills); icon set, no emojis. Never use website gloss (glints, glows, shimmer, frosted photo sections)	
Inclusion AI tools	Standard hub cards in the collection tones, INCLUSION AI pill with the gold sparkle, You give / You get strip, Evergreen buttons, labelled output boxes with copy buttons	No separate AI look and no gold grounds, outlines or glows. Voice input and outputs follow the Brand Voice Guide
Lessons and modules	12-slide template, fixed image positions, reflection boxes	Quiz feedback in Pale Sage and Warning fills
Resources and workbooks	Cream A4, Pale Sage fillable fields, Sage Deep for large headings only	Design in Canva Brand Kit, make fillable in Acrobat
Social	Forest or Sage statement cards, tinted photography, logo bottom right	Three-tier hashtags per the Voice Guide; emojis in captions only
Video, podcast, email	Branded title cards, tinted guest photos, Playfair titles, one story per email	Captions always on; artwork legible at thumbnail size
Documents and proposals	Ink text, Evergreen headings, logo, generous margins	No gradients or Gold

For developers (Impact Platform)

Brand tokens are CSS custom properties. On approval, replace the `:root` block in `app/globals.css` with these token names and values, update DESIGN-RULES.md to match, then migrate hard-coded hex values page by page. Keep inline styles referencing variables only; never paste raw hex values into components.
